The Art Of Heating

Towel Warmers & Olycal Radiators
Overview

Michel Cinier

AN EXCEPTIONAL
COMFORT OF
HEATING
A custom design

Marble Baron 130 Towel Warmer & Radiator. 130 cm x 50 cm (51 inch x 19-3/4 inch).

Shown with 1 towel bar. Also available with 2 towel bars or 3 towel hooks. Available for electric, output: 650W or hydronic, output: 580W.
Material: Olycal stone. Handpainted by the french Artist : Johanne Cinier. Each piece is unique.

Combine the highest level of technology with the design creativity to deliver the "Art Of Heating", a Cinier towel warmer, radiator or decorative fan coil.

Single color mod. Raw Concrete with an oversized towel bar.

VOILE EPURE

Unique comfort of heating, all Cinier products are made with oylcal stone to deliver an exceptional level of radiation when heating.

PALACIO COLLECTION

CINIER, THE ART OF HEATING

ENVIRONMENTALLY FRIENDLY AND CONTEMPORARY

The Ateliers Cinier has reinvented the radiator to be a decorative work of art and is the only company in the world producing a collection of radiators made with Olycal stone since 1990.

In addition to being respectful of the environment, Cinier radiators offer the highest level of technology, quality of fabrication and creativity to deliver excellence in the art of heating.

CINIER,
AN ENVIRONMENTALLY
FRIENDLY SOLUTION.

CINIER,
A TOP SOLUTION
FOR ENERGY SAVINGS.

CINIER,
TECHNOLOGICAL EXCELLENCE
AND EXCEPTIONAL COMFORT.

CINIER,
DESIGN AND CREATIVITY.

The raw material used to produce Cinier radiators is a natural stone quarried in the mountains between France and Spain. With a level of inertia similar to cast iron, this natural stone has exceptional radiation and heat diffusion characteristics.

The Olycal stone used in the large size Cinier radiators allows them to be heated at a low temperature, to maximize energy efficiency. The electronic regulation process minimizes energy consumption and allows temperature setting accuracy to the exact degree desired while automatically adjusting it when required.

Cinier radiators are designed to operate with both hydronic and electric systems. In Cinier's hydronic radiators, the coil is a custom element made of copper, the material most desired for its heat transfer properties as well as conduction and comfort of heating. In Cinier's electric radiators, the heating element is a very specific electric cable with double insulation and is designed to be free of any deterioration over time.

Thanks to the radiation characteristics of Olycal® stone and the quality of Cinier's heating element, the radiators offer a unique level of heating comfort and provide a noise and bacteria free heating solution with no air circulation or draft.

All materials specified in the fabrication of Cinier radiators have been carefully selected for their respect of the environment and are brought into the fabrication process with great attention to detail; all the fabrication is completed in France at the Ateliers Cinier and all products are tested and carry a 5 year warranty.

While some Cinier radiators are true sculpture, all Cinier radiators are fabricated with undevoted attention to detail and all receive the same finishing patina done by hand.

The level of craftsmanship seen in the fabrication process gives each Cinier radiator a soul making each one different and truly unique. Cinier's unparalleled attention to detail and technical know-how provide a wide variety of options and make Cinier radiators a unique work of art.

Since 1975, Michel Cinier has been signing all new product lines introduced by the company.

The company has expanded its range of product lines to include the works of two artists, creating new designs with a level of creativity such that the design often becomes even more valuable to the customer than the technical performance of the product.

Patrice Palacio, painting artist at the Drouot gallery in Paris, presents three unique designs on the concept of time and movement and two unique hand-painted creations on Manhattan and Paris.

Johanne Cinier, creative director at the Cinier company, finds her inspiration in colors when creating new radiator designs, and those designs become a complete representation of contemporary art.

« Being surrounded by beauty is a way of living, everyone has his own view of it, the most important is to enjoy it. »
